Abhinita Sanabada

Software Engineer, Data and AI Systems

Sunnyvale, CA | (669) 241-8492 | abhinita.sanabada@gmail.com | sanabada.github.io | LinkedIn | GitHub

Seeking full-time roles in software, data, and AI engineering. Available to start now.

SUMMARY

Software engineer with 10 years of production experience building backend services, data pipelines, and batch processing for trading, risk, and wealth platforms at Wells Fargo, JPMorgan Chase, and SAP Labs. Now completing an M.S. in Applied Data Intelligence at San José State after an AI engineering internship, building LLM agents, retrieval systems, guardrailed AI workflows, and on-device inference. Known for correctness, observability, and owning systems end to end, from design through on-call support.

SKILLS

- **Languages:** Python, SQL, Java, JavaScript/TypeScript
- **LLM / GenAI:** LangChain, LangGraph, RAG, embeddings and semantic search, MCP, tool calling, NeMo Guardrails, vLLM, LoRA fine-tuning, human-in-the-loop design
- **Data engineering:** Spark/PySpark, Airflow, Kafka, Snowflake, HDFS, MapReduce, ETL/ELT, data-quality validation
- **ML:** PyTorch, scikit-learn, Spark ML, CNNs, BiLSTMs, attention, model evaluation and calibration, error analysis
- **Backend:** Spring Boot, FastAPI, Node.js/Express, React/Next.js, REST, GraphQL, WebSockets
- **Cloud and ops:** AWS, Azure, Docker, Kubernetes/Kyma, Jenkins, Linux/Unix, AutoSys, Splunk, ServiceNow
- **Databases:** Oracle, PostgreSQL, MySQL, MongoDB, Redis, Snowflake

EXPERIENCE

Healthcare Startup (Confidential) Jun 2026 – Aug 2026

AI Engineer Intern

- Built multi-agent workflows with LangChain/LangGraph for patient-data and clinical-document processing.
- Added NVIDIA NeMo Guardrails safety checks, policy constraints, and structured outputs around healthcare LLM interactions.
- Implemented ingestion, preprocessing, feature-extraction, and retrieval-ready data preparation modules for downstream AI/ML workflows.
- Owned deployment, API integration, and debugging end to end on a small, fast-moving team.

Wells Fargo Nov 2021 – Jan 2024

Senior Software Engineer

- Built and owned Java/Spring services, REST APIs, and SQL processing for the futures clearing platform: trade capture, clearing and allocations, positions, margin, and risk.
- Optimized SQL stored procedures in core processing modules for ~30% faster runtimes and stronger edge-case correctness.
- Automated end-of-day margin, risk, and position cycles with AutoSys job chains on Linux (dependencies, retries, alerts, runbooks), reducing manual intervention.
- Built triage tooling over runbooks, Splunk, ServiceNow, and AutoSys metadata to speed incident resolution and on-call handoffs.

SAP Labs Apr 2019 – Oct 2021

Software Development Engineer 2

- Delivered an automotive orchestration solution on SAP HANA Cloud (AWS) that automated engineering tasks and shift scheduling.
- Led a Kyma/Kubernetes proof of concept for cloud-native extensibility; containerized services with Docker to improve diagnostics and deployment visibility.
- Owned post-release reliability: monitored system health, investigated incidents in Splunk, tracked issues in ServiceNow, and shipped hotfixes.

JPMorgan Chase & Co. Jan 2017 – Apr 2019

Software Engineer

- Built Spring Boot services and data-access layers across Oracle and MongoDB for asset and wealth management, keeping client and position records consistent across systems.
- Implemented validation, error handling, audit-friendly logging, and Kafka event integration for sensitive financial transactions.
- Partnered with QA and operations on production triage; standardized logs and runbooks to cut time-to-diagnose.

Capgemini Apr 2014 – Aug 2016

Software Engineer

- Built banking reporting solutions in Core Java and Oracle, with complex SQL and Power BI/Tableau reports for regulatory and management reporting.

PROJECTS

EdgeSupport: on-site IT triage on an HP ZGX Nano code *HP Edge AI Hackathon, SJSU, 2026*

- Built the original privacy-redaction and telemetry pipeline, then led integration of teammates' FastAPI backend and endpoint collectors (11 of 16 commits).
- Served Qwen2.5-7B locally with vLLM on an NVIDIA GB10; self-consistency gates keep a ticket on site only when sampled answers agree and cite evidence, otherwise it escalates with a reason code.
- Reached 95% category accuracy vs. 75% for a rules-only baseline on a held-out synthetic set, with zero PII leaked; 107 automated tests pass on the device.

NYC Taxi Batch and Real-Time Data Pipeline code *Airflow, PySpark, Snowflake, Docker*

- Built two Dockerized Airflow DAGs: monthly NYC trip data cleaned with PySpark and loaded to Snowflake, plus an hourly OpenWeather API feed.
- Made reruns safe with staging tables, MERGE upserts, and transactional loads with rollback, so reloading never duplicates trips.

Agentic Recruiting Workflow Simulation code *Kafka, FastAPI, Node.js, React, Redis, AWS*

- Built Kafka-orchestrated agent workflows for resume parsing, candidate-job matching, shortlisting, and outreach drafting with human-in-the-loop approval.
- Added WebSocket progress streaming, idempotent consumers, event logging, and failure handling; benchmarked on a seeded 10K-record dataset.

Healthcare Affordability Semantic Search code *PySpark, Spark ML, HDFS, MiniLM*

- Cleaned ~4 GB of CMS pricing data (13.6M+ rows) into ~47K standardized procedure records; added MiniLM semantic search and Spark regression for price estimates.

Speech Emotion Recognition with Dialogue Context code *PyTorch, CNN, BiLSTM, Attention*

- Modeled Log-Mel and MFCC audio features with focal loss and speaker normalization; reached 55.9% accuracy and 52.4% Macro-F1 on IEMOCAP, beating MLP and transformer baselines.

EDUCATION

M.S. Applied Data Intelligence – San José State University, San Jose, CA Expected May 2027

Coursework: Machine Learning, Deep Learning, Generative AI, Distributed Systems, Cloud Computing, Database Systems, Algorithms

B.Tech. Electronics and Communication Engineering – Biju Patnaik University of Technology 2008 – 2012

CERTIFICATIONS AND RECOGNITION

- AWS Fundamentals; Microsoft Azure Fundamentals; Machine Learning Engineering (Andrew Ng)
- Employee appreciation award for ownership and delivery in production, risk-sensitive environments
