Mob.: (669)-241-8492 | abhinita.sanabada@gmail.com | Portfolio | LinkedIn

SUMMARY

Senior Software Engineer with 9+ years building and operating backend services, workflow automation, and cloud-native deployments. Strong in Java/Spring, SQL, CI/CD, and production operations (Splunk, ServiceNow), with experience in distributed data pipelines (Kafka, Spark).

SKILLS

- **Languages/Data:** Java, Python, SQL, NumPy, Pandas, scikit-learn
 - **Backend:** Spring Boot/MVC, REST APIs, FastAPI, GraphQL | **Testing/Perf:** JUnit, Selenium, k6
 - **Systems/Cloud/Ops:** Linux/Unix, AutoSys, AWS, Azure, Docker, Kubernetes/Kyma, Jenkins, Splunk, ServiceNow
 - **Distributed/Data:** Kafka, Spark (PySpark), HDFS/MapReduce | **Certificates:** AWS Fundamentals
 - **Agentic AI:** LangChain, LangGraph, RAG (LLM)
-

WORK EXPERIENCE

Wells Fargo

Nov. 2021 – Jan. 2024

Senior Software Engineer

- Built and owned Java/Spring services and REST APIs for the **FCM (Futures Commission Merchant)** platform, enabling **futures & options** workflows across **trade capture** → **clearing/allocations** → **positions/margin/risk**; improved latency, correctness, and auditability via stronger instrumentation and structured logging.
- Hardened **EOD margin/risk/positions** processing by automating and standardizing **AutoSys** job chains on Linux/Unix (dependencies, retries, alerts, runbooks), reducing manual intervention and improving run consistency for risk-sensitive back-office cycles.
- Built an **Agentic AI** ops copilot (LLM + RAG) over runbooks + Splunk + ServiceNow + AutoSys metadata to triage breaks and recommend next actions with human-in-the-loop approvals; reduced incident investigation time and improved on-call handoffs.
- Optimized SQL stored procedures supporting core processing modules, delivering **30% performance improvement** and improved edge-case correctness through query tuning and validation.

SAP Labs

Apr. 2019 – Oct. 2021

Software Development Engineer 2

- Delivered an automotive orchestration solution deployed on **AWS HANA Cloud**, automating engineering tasks and shift scheduling; implemented maintainable services and API workflows for product-scale usage.
- Led a proof-of-concept In R&D on Kyma which was build on (**Kubernetes**) to enable cloud-native extensibility; containerized services with **Docker** and improved diagnostics and operational stability.
- Owned post-release reliability: monitored health, investigated incidents in Splunk, managed issues in ServiceNow, and shipped hotfixes; enforced secure coding practices (**authN/authZ, encryption, secure storage**).

JPMorgan Chase & Co.

Jan. 2017 – Apr. 2019

Software Engineer

- Built backend services and web applications for **asset/wealth management** workflows, delivering Spring Boot REST endpoints and service integrations under Agile delivery.

- Designed data-access and persistence layers across **Oracle** and **MongoDB**, including synchronization/replication patterns to keep client/position records consistent across systems and support reporting/analytics.
- Implemented validation, **error handling, and audit-friendly logging** for sensitive financial transactions with **Kafka** integration; improved release stability through CI-backed unit/integration testing and controlled deployments.
- Partnered with QA/ops to triage production issues and ship fixes; improved observability and reduced time-to-diagnose by standardizing logs and operational runbooks.

Capgemini

Apr. 2014 – Aug. 2016

Software Engineer

- Built reporting and data solutions for banking clients using Core Java and Oracle; developed **PowerBi/tableau** reports and complex SQL (joins, CTEs, stored procedures) for regulatory/management data analysis.
- Improved report reliability and performance by tuning SQL, handling data edge-cases with **pyspark**, and hardening error paths; collaborated with stakeholders to convert requirements into production-ready deliverables.

ACADEMIC PROJECTS

- **Real-Time SMS Spam Classification Pipeline:** [link](#)
 - Built a real-time Kafka + REST pipeline to classify and flag spam messages; added structured logging, reproducible runs, and model versioning for auditability.
 - Designed evaluation workflow to pick thresholds responsibly; tracked precision, recall, F1, latency, drift, and monitored data quality over time.
- **Healthcare Affordability Finder System:** [link](#)
 - Built an end-to-end pipeline on HDFS + MapReduce + Spark to ingest ~4GB CMS data (13.6M rows) and produce ~47K standardized procedure-level rows to support affordability exploration.
 - Implemented semantic search over ~47K procedures (MiniLM SentenceTransformer) so users can query “knee replacement” and retrieve relevant procedures with estimated cash prices.

ACHIEVEMENTS

- Participated in a Wells Fargo internal hackathon and contributed to a working prototype aligned to business workflows.
- Received employee appreciation recognition for ownership and delivery in a production, risk-sensitive environment.
- Earned a Microsoft Azure certification (fundamentals-level cloud concepts and services).
- Completed Andrew Ng’s ML Engineering certificate (end-to-end ML system design, training, evaluation, and deployment fundamentals).

EDUCATION

San José State University, San Jose, CA

Jan. 2025 – Dec. 2026 (expected)

M.S. Data Science — Coursework: Distributed Systems, Cloud Computing, Database Systems, ML, GenAI, Software Engineering, Algorithms

Biju Pattnaik University of Technology

Jun. 2008 – Jun. 2012

B.Tech. in Electronics and Communication Engineering
