SUMMARY

Senior Software Engineer building and operating backend services, workflow automation, and cloud-native deployments, with a focus on reliability, performance, and clean API design. Built and supported production systems using Linux/Unix, Docker/Kubernetes, and CI/CD; experienced in on-call operations leveraging Splunk and ServiceNow, and in distributed data pipelines using Kafka and Spark.

SKILLS

- **Languages:** Java, Python, SQL — **Data/ML:** NumPy, Pandas, scikit-learn, Agenitc AI with langchain/graph(LLM)
 - **Backend:** Spring Boot/MVC, REST APIs, FastAPI, GraphQL — **Testing/Perf:** JUnit, Selenium, k6
 - **Frontend:** React, JavaScript, HTML, CSS — **Systems/Cloud:** Linux/Unix, AutoSys, AWS, Azure, Docker, Kubernetes/Kyma
 - **CI/CD & Ops:** Jenkins, Splunk, ServiceNow — **Distributed/Data:** Kafka, Spark (PySpark), HDFS/MapReduce
 - **Certificates:** AWS Fundamentals
-

WORK EXPERIENCE

Wells Fargo, *Senior Software Engineer*

Nov. 2021 – Jan. 2024

- Built and owned Java/Spring services and REST APIs for the **FCM (Futures Commission Merchant)** platform, enabling **futures & options** workflows across **trade capture** → **clearing/allocations** → **positions/margin/risk**; improved latency, correctness, and auditability via stronger instrumentation and structured logging.
- Hardened **EOD margin/risk/positions** processing by automating and standardizing **AutoSys** job chains on Linux/Unix (dependencies, retries, alerts, runbooks), reducing manual intervention and improving run consistency for risk-sensitive back-office cycles.
- Built an **Agentic AI** ops copilot (LLM + RAG) over runbooks + Splunk + ServiceNow + AutoSys metadata to triage breaks and recommend next actions with human-in-the-loop approvals; reduced incident investigation time and improved on-call handoffs.
- Optimized SQL stored procedures supporting core processing modules, delivering **30% performance improvement** and improved edge-case correctness through query tuning and validation.

SAP Labs, *Software Development Engineer 2*

Apr. 2019 – Oct. 2021

- Delivered an automotive orchestration solution to automate engineering tasks and shift scheduling, deployed on **AWS HANA Cloud** for global availability; built maintainable services and API workflows for product-scale usage.
 - Led a **Kyma (Kubernetes)** proof-of-concept to enable cloud-native extensibility for the product; containerized services with **Docker** and improved diagnostics to support scalable deployments.
 - Owned post-release stability: monitored system health, investigated incidents via **Splunk**, managed customer issues in **ServiceNow**, and shipped hotfixes to reduce repeat failures with taking care of secure coding, authN/authZ, encryption, secure storage.
 - Strengthened operability by improving logging/telemetry and documenting common failure modes, enabling faster triage as the solution scaled across automotive customers.
-

Academic Projects

Real-Time SMS Spam Classification Pipeline: [link](#)

- Built a real-time **Kafka + REST** pipeline to classify and flag spam messages, reducing unwanted/unsafe content reaching users; added structured logging and reproducible run tracking.
- Designed an evaluation workflow to pick thresholds responsibly; tracked **precision, recall, F1, latency, drift** and versioned data/models for auditability.

Healthcare Affordability Finder System: [link](#)

- Built an end-to-end pipeline on **HDFS + MapReduce + Spark** to ingest **~4GB CMS data (13.6M rows)** and produce **~47K** standardized procedure-level rows to support real-world affordability exploration.
 - Implemented **semantic search** over **~47K** procedures (MiniLM SentenceTransformer) so users can query “knee replacement” and discover relevant procedures with estimated cash prices.
-

EDUCATION

- **San José State University**, San Jose, CA

M.S. Data Science — Coursework: Distributed Systems, Cloud Computing, Database Systems, ML, GenAI, Software Engineering, Algorithms

Jan 2025 – Dec 2026 (expected)

- **Biju Pattnaik University of Technology**,

Bachelors in Technology, ECE
