Summary

Seeking **Summer 2026 Software Engineering internship**

Technical Skills

Languages: Java, Python, SQL

Data Engineering: Apache Kafka, Apache Spark (PySpark), Airflow, ETL, data modeling, data quality checks

Platforms: Hadoop, HDFS **Databases:** MySQL, Oracle, MongoDB

Cloud/DevOps: AWS, Azure, Snowflake, Docker

Backend: Spring Boot, Spring MVC, Microservices, REST APIs

Other: Git, Linux, JIRA, Agile/Scrum

Education

San José State University

San Jose, CA

M.S., Data Science

Jan 2025 – May 2027 (expected)

Relevant courses: Machine Learning, Deep Learning, Gen AI, Big Data Analytics, Data Visualization, Cloud Computing, Database Systems, Distributed Systems, Software Engineering, Algorithms

Biju Patnaik University of Technology

Btech Electronics and Communication Engineering

Academic Projects

Real-Time SMS Spam Classification Pipeline

- Built a **real-time SMS spam detection** service on top of **Kafka** that streams messages from the UCI SMS Spam Collection dataset, classifies each message as spam or ham, and updates the model as new labeled data arrives.
- The system continuously tracks **rolling metrics** (throughput, latency, accuracy/precision/recall) and stores predictions for later analysis, making it easy to monitor performance and regression-test new model versions.

Mental Health Risk Prediction (Social & Behavioral Features)

- Built a system that flags **mental-health risk levels** from survey data on social media use, sleep, stress, and activity.
- Designed a simple data model and processing pipeline (cleaning, validation, feature generation, **risk_flag** logic) so each step is modular and easy to reuse or test.
- Trained Logistic Regression / Random Forest behind a common interface and fed their predictions into **Tableau/Power BI** dashboards for monitoring risk patterns over time.

Stock Prediction using Snowflake

- Developed an automated daily **Apache Airflow** pipeline that pulls market **OHLCV** data from **yfinance**, normalizes it, and performs idempotent **MERGE**-based upserts into **Snowflake**, with clear task separation, retries, and failure alerts.
- Implemented a scheduled forecasting step with **Snowflake / Snowflake ML** that writes forecasts and actuals into BI-ready tables, managing credentials (**Airflow Connections/Variables**), raw analytics lineage → model →, safe backfills, and auditable runs.

Other Experience & Achievements

Software engineering intern with experience in **Java/Spring** backend services, test automation (**Selenium/TestNG**), and cloud-native development on **Docker**, **Kubernetes**, and **Azure**; **AWS Fundamentals** certified and actively involved in the AI/data community through the **AGI House** building-model competition and **Snowflake** and **NVIDIA** agentic AI conferences.
